TR for Windows EUHFC initial exchange file

ZIP file contains 2 files:

  - "INITIAL.EX« (callsigns and last two digits of the year of operator's first ever official amateur radio license)

- "README.pdf" file (this help file)

Please UNZIP zipped file to a known place on your computer and copy "INITIAL.EX" into the TR4W folder (where you have TR4W.exe) and start the program. Select "European HFC" under the contest, fill in your 2-digit license year under "MY ZONE" and select appropriate category. You will be informed *"There were xxxxx calls found in initial exchange file."*

Only one extra setting is recommended under *"Configuration commands"* (Ctrl+J):

INITIAL EXCHANGE OVERWRITE = TRUE

You are ready to go!

Just remember! Log what you heard, not what a database tells you that you might have heard. If you didn't hear it, don't log it. Exchange guessing feature is not a replacement for your ears!

73 & GL in contest
